

# Ants

- Large mounds of soil, 1-2 feet in diameter and more than 1 foot high, appear throughout the lawn.
- Ants are reddish in colour and up to 1/4 inch long.
- The head is normal size, but the last segment of the antenna is longer than that of other ants.
- They are most often a problem in sunny sites and clay soils.
- saturate the mound itself with insecticidal soap, or call Weed Man to help you.
